PROFILE

Full-stack engineer inside the Pará State Department of Education (SEDUC-PA) since 2023, where I grew from intern to technical lead and product owner of the platform its finance directorates run on — Next.js 15, React, TypeScript and PostgreSQL, used every day by around 50 people. I own systems end to end: data model, business logic, interface, deployment and the people who depend on them. My depth is in financial operations software — budget execution, settlements, payments, reconciliation, and the anomaly detection that catches what a spreadsheet quietly hides.

EXPERIENCE

Tech Lead & Product Owner — SIMF

2026 — present

Montreal Informática · SEDUC-PA — Belém, Brazil

- Technical decision-maker and product owner of an internal platform that monitors budget and financial execution for the state education department — in active daily use by around 50 people across two directorates, from operational staff to the deputy secretary.
- Built with Next.js 15 (App Router), React, Tailwind and Supabase/PostgreSQL, reading from the state financial system; covers budget execution, settlements, payments and bank-account tracking, with role-based access control.
- Own the deployment: Ubuntu 24.04 server behind Nginx with PM2, internal DNS and HTTPS across the corporate network.

Developer

Nov 2025 — Mar 2026

Kapa · SEDUC-PA — Belém, Brazil

- Built and shipped the automation that tracks daily instalments paid to municipalities under two state programmes (school transport and school meals) — from the raw financial report through to the PDFs and messages the Secretary receives.
- Replaced a two-spreadsheet Google Sheets + Apps Script process, and added anomaly detection that surfaced duplicate payment orders the previous process silently hid.
- Python, Streamlit, SQLite, Selenium and Google Sheets, with the domain logic isolated in pure Python so it could later migrate into the main platform.

Intern

Sep 2023 — 2025

SEDUC-PA — Belém, Brazil

- Joined the department as an intern and worked across data and automation for two years — the ground the systems above were built on.

SELECTED PROJECTS

- **ClickContas** — modular accounting SaaS, in production with real clients. Gemini-based OCR reads handwritten timesheets; collaborative cash book; two data stores (PostgreSQL and Google Sheets) chosen per access pattern.
- **Sensse** (sensse.com.br) — my own e-commerce in Next.js, catalogue through back-office, in production.
- **Balcão de Atendimento** — scheduling and auditable proof of service for a federal education programme. Sole developer; public demo repository.
- **Cherry Bomb** — vending machine that takes no card terminal: a QR code opens a mobile storefront mirroring the physical grid, and one Pix charge covers the basket. FastAPI, PostgreSQL, Mercado Pago, Railway. Software in production; the hardware release is specified but not built.

Case studies, with screenshots, at romaodev.com/projects.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL
Frontend	React, Next.js 15, Tailwind CSS, Streamlit
Backend & infra	Node.js, PostgreSQL, Supabase, SQLite, REST APIs, Ubuntu (Nginx, PM2)
Data & automation	Pandas, Selenium, web scraping, RPA, anomaly detection, OCR
Practices	Git, testing with Vitest, Google Apps Script, generative AI for productivity

EDUCATION, LANGUAGES AND RECOGNITION

- **Three postgraduate specialisations (lato sensu)** — FAMEESP, in progress (due 2027): Generative AI and Intelligent Agents for Business; Data Science and Big Data Analytics; Software Engineering
- **BSc in Computer Science** — Universidade Cruzeiro do Sul, Brazil (2021–2025)
- **Languages** — Portuguese (native); English B2 Upper Intermediate (EF SET, 2025)
- **Outstanding Achievement, I2A2 “AI for Sustainable Projects — Towards COP 30”** (Dec 2025) — co-led EcoPredict, a machine-learning project on sustainability metrics for Belém, selected among the top 7 worldwide.
